

### **Amendments to the Claims:**

The following listing of claims will replace all prior versions and listing of claims in this application.

### **Listing of Claims:**

1. (previously presented) A light emitting display comprising:  
a first addressing electrode;  
a second addressing electrode; and  
a nanomorphous material layer having at least one nanomorphous non-polymeric organic compound which is positioned between the first addressing electrode and the second addressing electrode and which is not a linking agent.
2. (currently amended) The light emitting display according to Claim 1, wherein the nanomorphous material is a first non-polymeric organic nanomorphous material adapted to luminesce at a first wavelength when addressed through the first and second electrodes.
3. (currently amended) The light emitting display according to Claim 2, further comprising:  
a second non-polymeric organic nanomorphous material positioned between the first addressing electrode and the second addressing electrode in a location other than a location of the first organic nanomorphous material, the second organic nanomorphous material being adapted to luminesce at a second wavelength different than the first wavelength when addressed through the first and second electrodes.
4. (previously presented) The light emitting display according to Claim 3, wherein the first non-polymeric organic nanomorphous material has an equivalent chemical composition when compared to the second organic nanomorphous material.

5. (previously presented) The light emitting display according to Claim 3, the first non-polymeric organic nanomorphous material having a first chemical composition, the second organic nanomorphous material having a second chemical composition, wherein the first chemical composition does not equal the second chemical composition.

6. (Cancelled)

7. (Cancelled)
